

✚ Brief description of goods

Reagent kit consisting of prepared enzymes and several types of buffer solutions.

They are used as a reagent for DNA research by mixing them at the ratios according to the set.

✚ Classification

3822.00-000

✚ Reason for classification

The kit is classified in subheading 3822.00 as prepared reagent since it is a set for a prepared reagent for physics and chemistry researches and also correspond to the provisions on the set in Note 3 to Section VI.

Although the main component of this kit is the prepared enzymes, the kit is not classified in heading 35.07 which covers “Enzymes; prepared enzymes not elsewhere specified or included.”

**Note:**

The nature of the goods to be the basis for customs duty assessment depends on the conditions at the time of the import declaration of the goods with some specific exceptions (Article 4 of the Customs Law).

This classification example describes general replies based on the certain condition and do not necessarily represent all cases. Therefore, the classification decision on your actual importation may be different from that described here according to its condition.

If you wish to have a reply about the tariff classification and duty rate of specific goods that will be respected at the examination of import declaration, please ask Customs for Advance Ruling in writing.
