

✿ Components for aluminum sash (2) (Those which are not cut to the dimensions for widow frame) Heading 76.10

✚ Brief description of goods

Aluminum profile with a length of approx. 6 m that has the same cross section as the groove of a window frame. It is used as the groove of a window frame by cutting to a constant length and performing processes such as drilling.

✚ Classification

7610.90-000

✚ Reason for classification

Since the profile is a formed product of a uniform cross-section along its whole length, it corresponds to “Profiles” prescribed in Note 1 (b) to Chapter 76. Additionally, since the cross section is formed into a special shape and it does not have versatility. Therefore, it is classified as stated above as an aluminum profile prepared for use in structures.

Note:

The nature of the goods to be the basis for customs duty assessment depends on the conditions at the time of the import declaration of the goods with some specific exceptions (Article 4 of the Customs Law).

This classification example describes general replies based on the certain condition and do not necessarily represent all cases. Therefore, the classification decision on your actual importation may be different from that described here according to its condition.

If you wish to have a reply about the tariff classification and duty rate of specific goods that will be respected at the examination of import declaration, please ask Customs for Advance Ruling in writing.
