

✚ Brief description of goods

Equipment that has a function of copying the image of text and graphics which is scanned using a flat head scanner (*) part, converted into digitally coded electrical signals and stored in memory as well as a function of printing and facsimile transmission and reception of text and graphics by connecting to an automatic data processing machine (ADP) or network.

* A type of scanner with which a manuscript is fixed on a transparent platen to scan it by irradiating light.

✚ Classification

8443.31-090

✚ Reason for classification

Since the equipment can be connected to an automatic data processing machine and network and has two or more functions of printing, copying, and facsimile transmission, it is classified as stated above according to the provisions of heading 84.43 and the Explanatory Note (II) (D) to heading 84.43.

**Note:**

The nature of the goods to be the basis for customs duty assessment depends on the conditions at the time of the import declaration of the goods with some specific exceptions (Article 4 of the Customs Law).

This classification example describes general replies based on the certain condition and do not necessarily represent all cases. Therefore, the classification decision on your actual importation may be different from that described here according to its condition.

If you wish to have a reply about the tariff classification and duty rate of specific goods that will be respected at the examination of import declaration, please ask Customs for Advance Ruling in writing.
